MOLECULAR INNOVATION

OXYGEN O₂ DYE FOR EYEBROWS AND EYELASHES

OXYGEN O₂ is a gentle system of clever coloring of brows and eyelashes. It is a non-ammonia dye based on molecular coloring technologies. The composition of the OXYGEN O₂ DYE FOR EYEBROWS AND EYELASHES includes coloring nanomolecules and care complex consisting of oat proteins, silk, panthenol, vitamins and keratin. Due to the modern formula, pigment microparticles penetrate into the hairs, contributing to stable and even coloring.

Instructions for use OXYGEN O₂ dye for eyebrows and eyelashes:

1. PREPARATION

Clean eyebrows and eyelashes using makeup remover that does not contain oils. The surface should be wiped dry.

2. MIXING

In a non-metallic container mix OXYGEN O₂ dye for eyebrows and eyelashes with OXYGEN O₂ cream-activator 2.7% in ratio 1:1. Thoroughly mix the composition to obtain smooth creamy consistency.

3. APPLICATION

EYEBROWS TINTING

1. For best result, prepare the shape of your eyebrows in advance.

2. Using a brush, apply the coloring composition, without stains and gaps, stretching the color strictly according to the desired shape. Comply with the symmetry and clarity of lines.

EYELASHES TINTING

1. Place protective patches under the lower eyelid.

2. Apply dye evenly on lashes with a microbrush or brush. **Attention! It is not recommended to open your eyes before the end of the procedure!**

4. TIME OF EXPOSURE

The maturing time of dye on the eyebrows and/or eyelashes varies from 5 to 10 minutes depending on the desired color depth. The maximum exposure time of the dye is 10 minutes.

5. FINAL PROCESSING

After 5 – 10 minutes, remove the dye with a cotton pad, slightly moistened with warm water.

6. STABILIZATION OF THE RESULT

After removing the dye from the eyebrows (eyelashes), for better results, it is recommended to use OXYGEN O₂ FixTone fluid-tone stabilizer. Moisten a cotton pad with a fluid-tone stabilizer, run it through the direction of hairs growth. Do not rinse.

COLORS:

Black #2.07	Warm walnut #5.42	Graphite #3.11	Brown #5.67	Clear Shade Diluter #0.0
----------------	-------------------------	-------------------	----------------	--------------------------------

For lighter shades add OXYGEN O₂ clear shade diluter to the dye.

OXYGEN O₂ GENTLE SYSTEM OF CLEVER COLORING

OXYGEN O₂ CREAM-DILUTER

The know-how of the coloring technology is the addition of depigmented cream (cream-diluter) to 4 basic colors, allowing a master to expand the color palette and to create any desired color from very light and delicate to basic and bright.

⚠ Diluter is not a coloring or brightening product, it can only be used to mix with basic colors.

The proportion of dye and diluter mixing:

Color depth					
Oxygen O ₂ Dye	●	●	●	●	●
Oxygen O ₂ Diluter	not used	●	●●	●●●	●●●●
Oxygen O ₂ cream-activator	ADD CREAM-ACTIVATOR (1:1 RATIO) TO THIS MIXTURE				

⚠ IMPORTANT! MIX THE DYE WITH DILUTER TO A UNIFORM CONSISTENCY, THEN ADD A CREAM-ACTIVATOR (IN A 1:1 RATIO)

OXYGEN O₂ FIXTONE FLUID-TONE STABILIZER

OXYGEN O₂ FixTone is used after tinting to stop development of dye on skin and hairs and to stabilize the result.

Silk hydrolysates, keratin hydrolysates and sophora extract contained in FixTone effectively moisturize, soften and strengthen hairs.

OXYGEN O₂ CREAM-ACTIVATOR 2.7%

A soft formula of cream-activator is developed specially for use with OXYGEN O₂ dye for eyebrows and eyelashes and ensures lasting eyebrows and eyelashes tinting. The minimum content of hydrogen peroxide in a cream-activator provides less aggressive effect on hairs and at the same time guarantees bright and resistant coloring.

OXYGEN O₂ DYE REMOVER

Dye remover is suitable for correcting or eliminating errors during the coloring process. It lightens the skin, but does not affect the color of the tinted hairs. The composition includes components, which strengthen hairs and soothe the skin.

ONLY FOR PROFESSIONAL USE

PRECAUTIONARY MEASURES Dye may cause an allergic reaction.

Before use, make the sensitivity test on the skin: mix a small amount of dye with cream-activator 2.7% (1:1), apply the mixture on the skin of the elbow bend for 30 minutes. If redness or swelling of the skin does not appear within 48 hours, proceed to tinting.

- Products are not intended for use on persons under the age of 16.
- Contains phenylenediamines (not more than 2%).
- Use protective gloves when working with dye.
- In case of contact with eyes or mouth, immediately rinse with plenty of water, consult a doctor if necessary.

A temporary «black henna» tattoo may increase the risk of allergies.

DO NOT USE THE DYE IF:

- you have a rash on your face, sensitive, irritated or damaged skin;
- you have already had any reaction after tinting hairs or eyebrows;
- you had a reaction to a temporary «black henna» tattoo before.
